— Deira, Dubai

Skills

- **Programming:** Python, SQL, Advanced Excel, Power Query, VBA/Macros, DAX, HTML & CSS.
- **Data Analysis:** Data Cleaning, Data Processing, ETL processes, Data pipelining & extraction, Exploratory, Statistical & Predictive Analysis, Data Visualization and Story Telling, Data Auditing.
- **Data Visualization & Reporting:** Power BI, Tableau, Google Analytics, Excel Dashboards, Report Generation, Dashboard Creation, Data Storytelling
- **Database Management:** MySQL, SQLite, PostgreSQL, DB2, AWS S3, Google Cloud, Dropbox, FTP
- **Machine Learning & Statistical Analysis:** Scikit-Learn, ML Algorithms, Exploratory & Statistical Analysis, Forecasting
- **LLM Integration & Intelligent Document Processing:** Large Language Models (GPT, Claude), NLP, OCR, Text Extraction & Preprocessing
- **Other Tools:** PowerPoint, Jupyter Notebook, VS Code, GitLab, GitHub, Redis
- **Soft Skills:** Strong Communication, Collaboration, Analytical Mindset, Stakeholder Engagement.

Experience

MIS Data Analyst **Mar 2026 - Aug 2026**
FIEROTECH, Dubai, UAE

- Introduced and implemented Python-based automation within the marketing team for daily marketing reports and KPI reporting, reducing manual effort and reporting time by 50%.
- Developed weekly and monthly Return on Ad Spend (ROAS) reports using cohort charts to analyze advertising performance and communicate key insights.
- Developed and maintained Excel and Google sheet reports and dashboards using advanced formulas, Pivot Tables, and data analysis techniques to support management decision-making.
- Managed marketing data for four different company brands, automating data collation and developing consolidated and brand-specific reports.
- Generated country-wise, brand-wise, and marketing agency-wise reports to support campaign performance monitoring and comparative analysis.
- Served as the sole Data Analyst for the marketing team, providing end-to-end data support, reporting, analysis, and actionable insights to support data-driven decisions.
- Streamlined marketing data processing and reporting workflows to improve reporting efficiency, data consistency, and visibility into key performance metrics.

Data Analyst **Mar 2025 - Mar 2026**
Husaini Brothers LLC, Dubai, UAE

- Collected, cleaned, transformed, and analyzed large volumes of structured and unstructured data from multiple business systems to support strategic decision-making, operational performance monitoring, and financial analysis.
- Collaborated closely with Sales, Marketing, Logistics, Finance, Procurement, HR, and Management teams to gather reporting requirements and develop data-driven reports, dashboards, and KPI frameworks tailored to business needs.
- Designed, developed, and maintained interactive Power BI and Advanced Excel dashboards to track sales performance, inventory metrics, operational KPIs, quotation conversion rates, LPO cycles, delivery performance, workforce productivity, and financial indicators.
- Automated reporting workflows using Python, Power Query, Excel Macros (VBA), and advanced Excel functions, reducing manual effort by 40%, improving reporting accuracy, and enhancing data consistency across departments.
- Prepared daily, weekly, monthly, and ad-hoc MIS reports for senior management, delivering actionable insights to support forecasting, planning, budgeting, and performance reviews.
- Performed trend analysis, variance analysis, demand forecasting, and inventory optimization studies to identify business opportunities, improve planning accuracy, and enhance operational efficiency.
- Built inventory and supply chain performance reports in collaboration with procurement and logistics teams, enabling better stock control, inventory visibility, and resource planning.
- Conducted customer, sales, and purchase behavior analysis to identify revenue opportunities, high-value customer segments, and performance improvement areas, contributing to more targeted business strategies.
- Developed standardized reporting frameworks, data validation processes, and documentation for business operations, ensuring data integrity, audit readiness, and reporting consistency across the organization.
- Analyzed workforce utilization, overtime trends, payroll data, and operational metrics to support cost control, compliance reporting, and management decision-making.

Python Developer, Data Specialist **Oct 2022 – Apr 2024**
Turbolab Technologies Pvt Ltd

- **Data Acquisition & Processing**: Designed and automated workflows for end-to-end data handling, reducing manual efforts by 75% and enhancing data accuracy by 50%. Streamlined data collection, preprocessing, cleaning, and post-processing for seamless data uploads to AWS S3, Google Cloud, Dropbox, and FTP servers, ensuring 100% on-time delivery.
- **Data-Driven Solutions**: Developed and deployed scalable, data-driven solutions using Python and SQL on the ScrapeHero Marketplace platform, optimizing data acquisition workflows.
- **Data Preprocessing & Quality Analysis**: Leveraged Pandas for efficient data cleaning, transformation, and quality validation, ensuring high data integrity and usability for analytics.
- **Dashboarding & Insights Delivery:** Created client-specific dashboards and analytical reports from scraped and processed datasets using Excel and BI tools, translating customer requirements into actionable insights, performance metrics, and data-driven inferences to support business, market, and operational decision-making.
- **Data API Development & Integration**: Built RESTful APIs using FastAPI and Django to facilitate real-time data access and integration for business intelligence and analytics.

Internship Trainee cum Intern in AI-Data Science **Apr 2022 – Sept 2022**
DDU GKY

- **Data Analysis & Predictive Modeling:** Applied machine learning techniques to analyze market trends and forecast student preferences with 85% accuracy.
- **Data Visualization & Reporting:** Used Tableau and Power BI to create interactive reports on key performance indicators.
- **Strategic Statistical Analysis:** Leveraged R and Python to perform advanced statistical analyses, uncovering trends that improved forecasting accuracy by 30%.

Education

Cochin University of Science and Technology **2017 - 2021**

- Bachelor of Technology in Mechanical Engineering
- CGPA : 7.94

Jawahar Navodaya Vidyala Palakkad **2016**

- High School / Higher Secondary - CBSE

Certifications

NASSCCOM Certified - AI - Data Scientist (SSC/Q8104) **Mar 2024**

- Achieved certification aligning with the National Skill Qualifications Framework Level 8, focusing on leveraging AI methodologies for data-driven decision-making. Gained skills in identifying actionable insights and improving business processes through advanced analytics.

IBM Data Science Professional Certificate - Coursera **Apl 2024 – Jul 2024**

- Completed a comprehensive, hands-on program covering Python, machine learning, data analysis, data visualization, and SQL, with practical projects that applied these skills to realworld scenarios.

Microsoft Power BI Desktop for Business Intelligence - Udemy **Aug 2024**

- Completed a course on Microsoft Power BI Desktop, focusing on data import, transformation, and visualization. Gained expertise in creating interactive dashboards, using DAX for advanced calculations.

Virtual Internship Program - Data Analytics and Visualization **Sept 2024**
Accenture North America - Forage

- Completed a comprehensive virtual internship simulating the role of a Data Analyst. Developed skills in marketing analytics, consumer behavior analysis, and strategic data storytelling.

Generative AI for Data Analysts Specialization - Coursera **Sept 2026**

- – Learned to apply generative AI tools, prompt engineering techniques, and AI-driven workflows to enhance data analytics and solve real-world business problems.

Virtual Internship Program - GenAI-Powered Data Analytics Job Simulation **Oct 2026**
Tata Insights and Quants (Tata iQ) - Forage

- Completed a job simulation focused on GenAI-powered analytics, predictive modeling, data quality assessment, business storytelling, and responsible AI-driven automation.

Projects

POWER BI PROJECTS

CityBike Analysis Project

- Built an interactive Power BI dashboard analyzing CityBike [rental / sales / ride] data to track KPIs such as [total rides, revenue, average trip duration, peak usage hours, station or product performance], using DAX measures and data modelling.
- Identified [usage trends, high-demand locations/time periods, and underperforming areas] to support data-driven decisions on [fleet allocation, pricing, and customer engagement].
- Tools Used: Power BI, DAX, Power Query, [Excel / SQL]

Supply Chain Analytics Project

- Analyzed sales, revenue, and customer trends across multiple regions using Power BI, Excel, and DAX, providing actionable insights to optimize marketing strategies and drive business growth.

MACHINE LEARNING / PYTHON PROJECTS

Bank Loan Approval Prediction / FASTag Fraud Detection:

- Objective: Predicted loan approval status using classification models on a dataset of 100,000+ records, achieving 95% accuracy / Developed a machine learning-based fraud detection system for FASTag transactions using a dataset of 200,000+ records, achieving 97% accuracy.
- Process: Data Collection, Wrangling, EDA, Interactive Visual Analytics, Predictive Analysis, Model Development, Evaluation, and Refinement.

ADVANCED SQL PROJECTS

DarkMart: Quick-Commerce Dark Store Analytics:

- Designed and built a normalized PostgreSQL database (8 core tables with primary/foreign keys and CHECK constraints) for a quick-commerce dark store network, and generated 5,000+ orders and 15,000+ order items of synthetic data using SQL.
- Answered business questions on revenue, 10-minute delivery SLA, stockout risk, and rider performance using joins, CTEs, subqueries, and window functions (RANK, LAG, running totals, moving averages).
- Tools Used: PostgreSQL, pgAdmin, PL/pgSQL, GitHub.
